

UK WITHDRAWAL FROM THE EUROPEAN UNION – COMPLIANCE WITH REGULATORY REQUIREMENTS

SNF is committed to assuring that all our products sourced from the EU/EEA and other third countries for the UK market, as well as those products manufactured by SNF in the UK for domestic use or for exportation to the EU/EEA and other third countries will meet the requirements of the chemical legislations in the downstream users' regions.

The SNF organization throughout the world is working along with SNF UK to ensure that our UK downstream users (those who do not hold an EU REACH registration) currently importing chemicals from an EU/EEA country are covered by a valid UK REACH registration. We will take on registration obligations through our UK-based entity, in order that our UK customers will retain their downstream user status. This will start as soon as the UK Government finalizes the registration requirements, as well as the procedures and IT systems as of January 2021.
